WoodWise AI

Why Lumber Industry?

- Millions of dollars lost every year due to inaccurate forecasting
- Increasing global trade pressures
- ***High availability of data*** but ***low AI adoption*** in lumber industry
 - Opportunity for AI to transform business operations

Impact of WoodWise AI Agent

Use Case

Independent use within mid-size to large-size manufacturing companies in the lumber industry, particularly in North America.

AND/OR

Integration with Microsoft Cloud for Manufacturing to **forecast demand** and **enhance predictive visibility**.

Microsoft. <https://www.microsoft.com/en-us/industry/manufacturing/microsoft-cloud-for-manufacturing#modal1>

Value Proposition

Easy to use, intuitive platform that combines AI automation with expert control.

North American Lumber industry faces increasing pressures due to tariffs, trade disputes, and supply chain issues.

WoodWise AI allows companies to respond faster to market changes.

Feasibility

Clear market need as lumber industry loses millions of dollars yearly due to inaccurate inventory predictions.

Aligns with the UN sustainable development goals and ESG standards.

- **Goal 9:** Industry, Innovation, and Infrastructure
- **Goal 12:** Responsible Consumption and Production
- **Goal 15:** Life on Land

Evaluating Usability of WoodWise AI

01

Multi-Agent System

Total of 4 agents: Forecasting agent, HITL agent, report generating agent, and scenario simulation agent

02

Human-In-The-Loop

Integration of Human-In-The-Loop functionality allows for the manual adjustment and review by experts in the field.

03

Responsible AI

Interactive dashboard provides transparency behind forecasts, allowing users to see key drivers of predictions. Microsoft Azure services provide additional layer of data privacy and security.
